SAMFCore

EXECUTIVE OVERVIEW / SOFTWARE INFRASTRUCTURE

Financial-services technology under your control

One integrated software environment for customer accounts, transfers, financial products, compliance workflows and institutional administration.

PERPETUAL
Continuing software-use rights

SOURCE CODE
Available under qualifying licences

INDEPENDENCE
Customer-controlled deployments

Swiss AMF AG · Zug, Switzerland · samfcore.com

For qualified prospective licensees. This overview is informational; only executed agreements establish licence rights, scope, deliverables, service levels and charges.

One platform. Multiple financial workflows.

01 Accounts & transactions

Customer and business profiles, multi-currency balances, transaction history, account transfers, fees and reporting workflows.

02 Banking, cards & digital assets

IBAN, payment, card and crypto workflows integrate with separately contracted financial-service, issuing, custody and liquidity providers.

03 KYC, AML & compliance operations

Configurable onboarding, document collection, case handling, risk assessment, monitoring rules, review queues and audit records.

04 Provider connectivity

API-based connection patterns permit selection or replacement of compatible providers through separately scoped, tested integrations.

05 Operator administration

Distinct USER and ADMIN applications support customer servicing, permissions, operational work queues and software configuration.

06 Source-code and hosting options

Qualifying perpetual licences provide contractual access to source code and customer-controlled hosting; underlying intellectual-property ownership remains with Swiss AMF AG.

Software licensing, not regulated financial services

SAMFCore software does not confer banking, payment, card-issuing, custody or VASP authorisations. The buyer remains responsible for its licences, provider contracts, operational controls and security. Provider and infrastructure charges are separate.

COMMERCIAL STRUCTURE

Perpetual and Monthly SaaS arrangements are offered with package-specific entitlements. No SAMFCore per-transaction software charge or transaction-revenue share applies; third-party service costs are separate. Direct upfront Perpetual Global, Perpetual + Full Source Code Global and Enterprise Global purchases include the 5-Prong Turnkey Launch Package; VAPT is included with Enterprise Global. Within the first 6 months of Monthly SaaS, 100% of qualifying monthly fees are credited toward a Perpetual Global Licence upgrade. Turnkey and VAPT inclusions do not apply through that upgrade. Services outside the included scope are separately agreed.

Full commercial terms and technical verification are provided through the buyer data room.
