SAMFCore

SAMFCORE OVERVIEW · SWISS AMF AG

A Powerful, Comprehensive Financial-Services Software Platform — Without Giving Up Long-Term Control.

SAMFCore, developed and commercialised by **Swiss AMF AG**, brings customer accounts, balances and transactions, payments, cards, digital assets, onboarding, compliance and back-office operations together in **one software environment** — deployed on your infrastructure and connected to the providers you choose.

Built for financial institutions, EMIs, payment companies, neobanks, fintechs and digital-asset businesses.

Actual SAMFCore screens: customer panel and administration dashboard.

LONG-TERM CONTROL

Perpetual Software Licensing

Secure permanent contractual usage rights to SAMFCore without depending on an indefinite recurring software subscription simply to continue using your platform.

Permanent usage rights · Customer-controlled deployment

Full Source Code Available

Under qualifying licences, inspect, maintain, modify and further develop your licensed SAMFCore deployment using your own technical team or appointed developers.

Control your development roadmap · Independent maintenance

Usage and source-code rights are contractual. The underlying SAMFCore intellectual property remains owned by Swiss AMF AG unless expressly agreed otherwise.

COMMERCIAL ECONOMICS

No Per-Transaction Fees. No Revenue Share.

Grow customer numbers and transaction volume without increasing SAMFCore software licence charges based on usage or giving SAMFCore a percentage of transaction revenue. Third-party provider and infrastructure costs remain separate.

Unlimited End Customers	No Per-Transaction Fees	No Revenue Share
within the licensed scope	on SAMFCore software	on your transaction revenue

PROOF

In Operational Use Since 2021

SAMFCore has been deployed in live financial-services environments since 2021, with continuous development since 2018.

2018 development began	**2021** live operational use	**Today** actively developed

Independent Swiss Legal Opinion

Independent Swiss legal counsel has reviewed SAMFCore's legal foundation, including Swiss AMF's IP ownership and commercialisation rights, perpetual and Full Source Code licensing, customer-controlled deployment, provider independence and data portability.

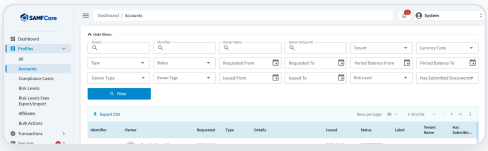

Available to qualified prospective buyers during advanced due diligence, subject to confidentiality.

CORE OPERATING CAPABILITIES

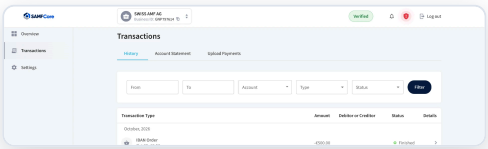

01 Accounts, Balances & Transaction Ledger

Built-in customer accounts and an internal transaction ledger are designed to preserve transaction and balance integrity across debits, credits, balance movements and complete transaction histories, with consistent balance updates, traceable records, internal transfers, supported reversals and provider reconciliation.

- Individual and corporate customer accounts
- Account-balance management
- Transaction accounting and histories
- Reconciliation
- Multi-currency account structures
- Internal account-to-account transfers
- Fees and balance adjustments
- Account and transaction reporting

Administration: customer accounts across currencies.

Customer panel: transaction history and statements.

Long-term control, predictable economics and proven operation — in one software platform.

CORE OPERATING CAPABILITIES · CONTINUED

02 Fiat & Digital Assets Together

Multi-currency fiat and digital assets operate in one environment, with multiple fiat-to-crypto and crypto-to-fiat pathways—including exchange, buying and selling crypto, funding cards and accounts, fiat wallets, transfers between internal customer accounts, and withdrawals to external bank accounts through integrated providers.

Custody, liquidity, banking and payment services are supplied through your selected external providers.

03 Compliance Built Into Operations

KYC/KYB onboarding, AML workflows, transaction monitoring, customer and country risk scoring, case management, role-based permissions and audit trails—all built into daily operations.

Beneficial-owner information · Document collection · Compliance reviews · Transaction flagging · Ongoing reviews · Administrative permissions · Activity history

Identity verification and sanctions, PEP and other specialist screening services can be connected through selected providers.

04 Freedom to Choose Your Providers

Connect banking, payment, card, custody and compliance providers through APIs, supplement or replace integrations as your needs evolve, and operate SAMFCore alongside existing core banking systems where required.

Customer-controlled deployment: you choose the hosting and infrastructure. Each provider integration is scoped to your deployment and the provider's capabilities.

05 Physical & Virtual Card Workflows

Support physical and virtual card ordering, activation, PIN/ePIN management, freeze and unfreeze, top-ups and card transaction visibility while connecting to the issuing provider appropriate to your programme.

Card issuing, processing and programme sponsorship are provided by your selected external card provider.

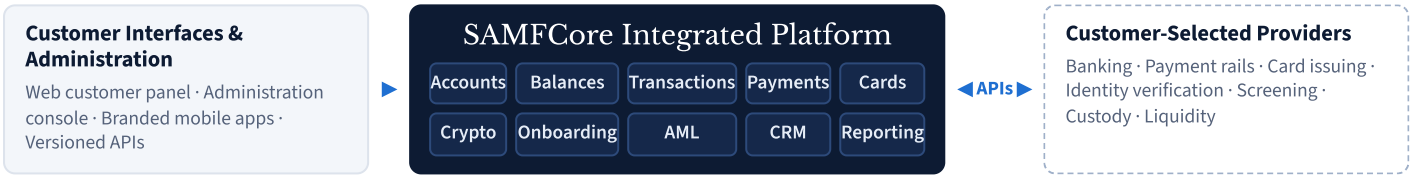

06 Progressive Cutover Migration

Move customers and agreed data to SAMFCore progressively, validating each stage before continuing rather than relying on one all-at-once cutover.

Account structures, balances, transaction histories and provider connections can be transitioned progressively where technically feasible.

Included only with a direct upfront Enterprise Global purchase, within the agreed implementation scope; not via the Monthly SaaS upgrade.

HOW IT WORKS TOGETHER · ONE COMMON SOFTWARE ENVIRONMENT

LICENCE OPTIONS

Monthly SaaS · Global	Annual Licence	Perpetual Licence	Perpetual + Full Source Code	Enterprise Global
From €8,000/month	€80,000/year	€325,000 one-time	From €620,000	€790,000 one-time

Monthly SaaS includes all 18 modules, unlimited customers, no transaction fees and 1 white-label brand (the licensee's); 100% of the first 6 months is credited toward a Perpetual Global Licence—upgrade when ready, never required. Details: samfcore.com/saas

Enterprise Global combines perpetual usage rights, Full Source Code, global deployment rights, unlimited white-label brands for one licensed legal entity and Progressive Cutover Migration within the agreed implementation scope (direct upfront purchase only, not via the Monthly SaaS upgrade).

IMPLEMENTATION & ONGOING SUPPORT · OPTIONAL SWISS AMF SERVICES

Keep the Control. Let Us Handle the Technical Work If You Want.

Provider Integration

Scoping, API mapping, sandbox testing and go-live with your selected providers.

Customisation & Support

Modify SAMFCore under your licence rights—your team, independent developers or ours. Maintenance optional.

Compliance & Certification

Support for ISO/IEC 27001, 27701, VAPT, SOC 2 Type II, PCI DSS and GDPR programmes—target approximately 90 days.

You do not have to choose between long-term independence and hands-on technical support. Run it yourself, use us per project, or as an ongoing partner—your choice.

ROADMAP **AI Operations in the Admin Panel** — nine compliance enhancements and a Policy Help Assistant · target release before February 2027

See Whether SAMFCore Fits Your Business

Tell us what you want to launch, the providers you need and the functionality, integration, support or compliance requirements involved. We'll show you what SAMFCore already provides, what can be configured and what additional services may be appropriate.
