SAMFCORE — PLATFORM OVERVIEW

One platform instead of a patchwork of systems

SAMFCore gives a financial-services business one platform for accounts, payments, cards, crypto, compliance, back-office operations, reporting, white-label brands and connections to selected external providers — with crypto-to-fiat and fiat-to-crypto flows in the same environment.

PLATFORM CAPABILITIES

What SAMFCore can cover

Accounts Client accounts, balances and account activity managed in one place.	**Payments** Payment processing across the flows your business runs.	**Cards** Card issuance and management alongside account activity.
Crypto Digital-asset wallets and operations for a business and its customers.	**Compliance** Customer verification, monitoring and case handling in the same environment.	**Back-office operations** Operational workflows, approvals and day-to-day administration.
Reporting Activity and management reporting drawn from one data set.	**White-label brands** Several brands operated from the same platform and the same core.	**External providers** Connections to selected external providers, integrated into the platform.

OWNERSHIP MODEL

Control that stays with you

Perpetual licence
License the platform perpetually — no indefinite dependence on one SaaS provider.

Optional full source code
With source code, use your own developers or third-party developers.

Customer-controlled infrastructure
Run the platform on infrastructure you control.

Independent maintenance

Maintain and evolve the platform independently.

Unlimited end customers

No SAMFCore transaction-volume licensing under the perpetual model — scale without software penalties.

WHY SAMFCORE

The main benefits

01
Faster launch

Start with an existing platform instead of building banking, payments, crypto, compliance, back office and reporting systems from scratch.

02
Crypto and fiat in one system

Support fiat-to-crypto and crypto-to-fiat activity without running separate disconnected platforms.

03
Better use of the licence you already own

A regulatory licence has limited commercial value without the technology to onboard clients and actually provide services.

04
White-label expansion

Operate additional customer-facing brands under the same licensed financial-services business.

05
Provider flexibility

Connect the banks, payment providers, KYC/KYB providers, card providers, custody providers and other external services you choose.

06
Lower vendor dependence

A perpetual licence and optional full source code mean you are not forced to rely indefinitely on one SaaS provider.

07
Control of the technology

Run it on your own infrastructure and, with source code, use your own or third-party developers.

08
Scale without software penalties

Unlimited end customers and no SAMFCore transaction-volume licensing under the perpetual model.

09
International expansion

Territorial licensing can be expanded from one country to global use.

10
Adds value to the company itself

A perpetual SAMFCore licence can remain with the licensed entity and contribute to the company's technology asset base if the company is later sold.
